

RECEIVED
CENTRAL FAX CENTER**MAR 26 2007** PATENT
455610-2590.2**REMARKS**

In light of the following remarks, reconsideration and allowance of this application are respectfully requested.

At paragraph 1 of the outstanding office action the Examiner has provisionally rejected claims 1-4, 8-10 and 17-21 under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-4 and 10-13 of copending Application No. 10/673,712 and claims 1-4, 7 and 9 of copending Application No. 10/673,713. Applicants reserve the right to address and challenge the obviousness-type double patenting rejection, including the right to file a Terminal Disclaimer, at a later date in the event this rejection is maintained and not made provisional. As prosecution has just begun in all three of these applications, it is unclear whether amendments to the claims may be made in one or more of the noted copending applications, and whether these amendments would render this provisional double-patenting rejection moot. Since the scope of the claims in such copending applications has not been determined, it is premature to consider whether the claims of the instant application define an obvious variation of the claims in the copending applications. Therefore Applicants request that this provisional rejection be held in abeyance and reconsidered at the completion of prosecution.

At paragraph 3 of the outstanding office action the Examiner has rejected claims 1 and 17-20 under 35 USC 102(e) as being anticipated by Tan et al. (US Patent 6,812,688). Applicants respectfully traverse the rejection.

Applicants note that the instant application claims the benefit of US Provisional Application 60/415,236 filed September 30, 2002, which predates the December 10, 2002 filing date of Tan et al. While Tan et al. similarly claims priority to a provisional application, a review

PATENT
455610-2590.2

of this provisional application reveals that at least Figure 1 of the Tan et al. patent, as well as other significant portions of the specification of the Tan et al. patent, are not found in the Tan et al. provisional application. Applicants therefore submit that the Tan et al. patent is not prior art to the present application. Further, the Examiner has not particularly pointed out those portions of the Tan et al. provisional application that disclose subject matter sufficient to reject the claims of the present application. Therefore, since the Examiner has not explained how the Tan et al. provisional application teaches the claimed invention, and since the Tan et al. patent is not necessarily prior art with respect to the present application, Applicants respectfully request that the rejection of claims 1 and 17-20 under 35 USC 102(e) be withdrawn.

Applicants note with appreciation the indication of allowable subject matter in claims 5-7, 11-13 and 14-16. Applicants additionally note that prior art has not been cited against claims 2-4 and 8-10. However, in light of the arguments noted above, applicants reserve the right to rewrite these claims in independent form to gain their allowance, should that become desirable upon consideration of the provisional double patenting rejection noted above.

CONCLUSION

It is to be appreciated that the foregoing comments concerning the disclosures in the cited prior art represent the present opinions of the applicants' undersigned attorney and, in the event, that the Examiner disagrees with any such opinions, it is requested that the Examiner indicate where in the reference or references, there is a basis for a contrary view.
